This book investigates how language, embodiment, objects, and settings in historically shaped communities combine, and form human actions.

- Illustrates formal patterns of organization that cut across diverse phenomena, thus creating possibilities for discovering common practices implicated in the constitution of human practice, social life, path-dependent historicity, and knowledge
- Demonstrates how to move from what people do and know to build the actual events that create their cognitive and social lives, to the analysis of general practices that organize what might appear to be quite dissimilar events
- Moves beyond the analysis of separate modalities to investigate how their intrinsic diversity as semiotic fields makes possible unique forms of action when joined to each other
